**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Morey et al. (USPN 5,007,705).

Morey et al. discloses an optical fiber having a Bragg diffraction grating contained within the optical element. This yields a light filtering and index variations to the light passing through the element.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Vengsarkar (USPN 5,430,817).

Vengsarkar discloses an optical fiber having a spectral shaping device contained within the fiber. This shifts light into a variety of wavelengths.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Welch et al. (USPN 6,021,106).

Welch et al. discloses a diffractive optical element. The optical element contains a diffraction pattern having multi-level diffractive components to alter light.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Borrelli et al. (USPN 6,284,685).

Borrelli et al. discloses an optical device having dopants within the glass yielding a change in the refraction and hence altering light patterns.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Bendett et al. (USPN 6,636,678).

Bendett et al. discloses an optical structure wherein the glass substrate is doped with rare earth elements. These elements cause diffraction to occur within the element.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 5 is rejected under 35 U.S.C. 102(e) as being anticipated by Sanders (USPN 6,456,771).

Sanders discloses an optical fiber having an embedded Bragg grating. This yields a light filtering and index variations to the light passing through the element.

Claim 5 is rejected under 35 U.S.C. 102(e) as being anticipated by Goto (USPN 6,836,365).

Goto discloses a diffractive optical element having a plurality of partial optical elements. These partial optical elements convert light to partial beam, that is, the light is diffracted.
